What is a MedKard

The MedKard is your secure and confidential interactive medical record that allows you to store, update and share health information with your physician or in an emergency situation

Why get a MedKard

Your personal health information is a valuable resource to you, your family, and the healthcare professionals who provide your treatment and care. But did you know that, in most cases, a complete record of all of your personal health information cannot be found in any single location or consistent format?

Each one of your healthcare providers (family practitioner, allergist, OB-GYN, etc.) compiles a separate medical record on you. These multiple medical records can give an inaccurate picture about your health.

The MedKard allows you to provide doctors/Emergency personnel with valuable information that can help improve the quality of care you receive. A MedKard can help reduce or eliminate the chance of medical errors and allows you to receive faster, safer treatment and care in an emergency. In short, a MedKard helps you play a more active role in your healthcare and also help prevent medical errors.

Did you know?

“Medical errors are one of the Nation’s leading causes of death and injury. A recent report by the Institute of Medicine estimates that as many as 44,000 to 98,000 people die in U.S. hospitals each year as the result of medical errors. This means that more people die from medical errors than from motor vehicle accidents, breast cancer, or AIDS”

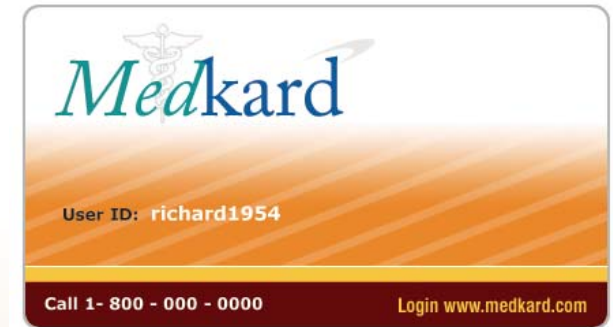

"Make sure that all health professionals involved in your care have important health information about you. Do not assume that everyone knows everything they need to"

“Medical errors happen when something that was planned as a part of medical care doesn’t work out, or when the wrong plan was used in the first place. Medical errors can occur anywhere in the health care system”

“Research shows that patients who are more involved with their care tend to get better results”
